TS React Base App

Using webpack as runtime

Used packages

- ☑ TailwindCSS
- ☑ React TS
- ☑ Axios
- ☑ Webpack

Develop

- 1. Edit `public\index.html <Head>` according to your preferences
    - Add additional `<meta>` or `<title>` tags for SEO
- 2. Add and develop additional `.tsx` components in `src/`

Developing and Building

- running the app in development mode - `npm start`
- building the app in production mode - `npm build`
